

Troubleshooting E-Prime 2.0.10.x

- If you use an InLine in a Procedure: Go to properties of that Procedure → Common → GeneratePreRun: set to BeforeObjectRun
- An E-Object (e.g. Slide/TextDisplay) before an Inline? Make sure to set Prerelease of that object to 0 (via Properties > Duration/Input tab)
- InputBox/MsgBox doesn't work? Go to Experiment Properties → Display → Set Flipping Enabled to No
- More info?
